Set-up your environment

Title Page

Include your names: Imane Ouahi, David Abelovic, Xi Hui, Rebecca Devasia Let's do it!!! Hi Rebecca

Include the tutorial group number: 5 2

Include your tutorial lecturer's name: Simon Loop

Part 1 - Identify a Social Problem

Use APA referencing throughout your document. Here's a link to some explanation.

1.1 Describe the Social Problem

Include the following:

- Why is this relevant?
- ...

Part 2 - Data Sourcing

2.1 Load in the data

Preferably from a URL, but if not, make sure to download the data and store it in a shared location that you can load the data in from. Do not store the data in a folder you include in the Github repository!

midwest is an example dataset included in the tidyverse package

2.2 Provide a short summary of the dataset(s)

```
summary(gpg_data)
```

```
##          freq          unit          nace_r2          geo
## Length   :584   Length   :584   Length   :584   Length   :584
## N.unique  : 1   N.unique  : 1   N.unique  : 1   N.unique  : 39
## N.blank   : 0   N.blank   : 0   N.blank   : 0   N.blank   : 0
## Min.nchar : 1   Min.nchar : 2   Min.nchar : 7   Min.nchar : 2
## Max.nchar : 1   Max.nchar : 2   Max.nchar : 7   Max.nchar : 9
##
##   TIME_PERIOD          values

## 3rd Qu. :38114
## Max.    :7297665
```

In this case we see 28 variables, but we miss some information on what units they are in. We also don't know anything about the year/moment in which this data has been captured.

These are things that are usually included in the metadata of the dataset. For your project, you need to provide us with the information from your metadata that we need to understand your dataset of choice.

2.3 Describe the type of variables included

Variables included in SALARY_DATA

- freq: This variable shows how often the data is collected over time. In this dataset, it is recorded annually (A).
- unit: The unit of measure variable shows the measurement scale used for the data values. The unit of measures used in this dataset are Euro and NAC (National currency).
- geo: The variable geological entity identifies 28 territorial units. It includes 26 individual European countries, represented by ISO 3166-1 alpha-2 codes, as well as two supranational aggregates.
- TIME_PERIOD: The time variable shows the time period covered by the dataset, which spans from 1995 to 2024. It is recorded in annual intervals using the YYYY format.
- values: the variable value is the annual salary in both euro and the national currency

Variables included in GPG_DATA

- **freq:** This variable shows how often the data is collected over time. In this dataset, it is recorded annually (A).
- **unit:** shows the measurement scale used for the data values. The unit of measures used in this dataset is percentage (PC).
- **nace_r2:** The variable `nace_r2` identifies the economic sector according to the NACE Rev. 2 classification. The category B-S excluding O includes industry, construction, and service activities, while excluding public administration, defence, and compulsory social security.
- **geo:** The variable `geological entity` 41 territorial units. It includes 37 individual European countries, represented by ISO 3166-1 alpha-2 codes, as well as four supranational aggregates.
- **TIME_PERIOD:** The time variable shows the time period covered by the dataset, which spans from 2007 to 2024. It is recorded in annual intervals using the YYYY format.
- **values:** The variable `value` represents the unadjusted Gender Pay Gap (GPG), which is the percentage difference in average gross hourly earnings between male and female employees, relative to male earnings.

Think of things like:

- Do the variables contain health information or SES information?
- Have they been measured by interviewing individuals or is the data coming from administrative sources?

Part 3 - Quantifying

3.1 Data cleaning

We perform several data cleaning steps to prepare the datasets for analysis: checking for missing values, removing incomplete observations, selecting relevant variables, and excluding aggregate regional entities.

We checked both datasets for missing values. The output shows the number of missing values in each variable.

We used `na.omit()` to remove observations with missing values from both datasets.

We kept only the variables needed for the analysis (country, year, and values). For the salary dataset, only observations reported in euros (EUR) were retained.

Eurostat datasets often include aggregate entities such as “EA19” (Euro area with 19 countries), “EA20” (Euro area with 20 countries), and “EU27_2020” (European Union with 27 member states, 2020 composition). We exclude these to focus exclusively on individual member states, enabling country-level comparisons.

3.2 Generate necessary variables

Variable 1

Variable 2

3.3 Visualize temporal variation

3.4 Visualize spatial variation

Gender Pay Gap Severity in 2024-01-01

Absolute Gap in Earnings (women vs men)

Gender Pay Gap Percentage in 2024-01-01

Percentage Difference in Average Earnings (women vs men)

Here you provide a description of why the plot above is relevant to your specific social problem.

3.5 Visualize sub-population variation

What is the poverty rate by state?

Distribution of Gender Pay Gap by European Region (2024-01-01)

Diamond markers indicate regional means

```
## # A tibble: 4 x 7
##   region      n mean_gpg median_gpg sd_gpg min_gpg max_gpg
##   <chr>   <int>   <dbl>     <dbl> <dbl>   <dbl>   <dbl>
## 1 Northern Europe     7    13.2      13.9   3.66     8.3    18.8
## 2 Eastern Europe      6    11.8      13.8   6.52     3.7    18.5
## 3 Western Europe      6     9.35     11.5   7.67    -0.8    17.6
## 4 Southern Europe     7     7.27      7.0   2.28     4.9    11.8
```

Here you provide a description of why the plot above is relevant to your specific social problem.

3.6 Event analysis

```
## Dataset query already saved in cache_list.json...

```

```
## # A tibble: 8 x 3
##   region      covid_period      mean_gpg
##   <chr>      <fct>          <dbl>
## 1 Eastern Europe Before COVID-19 (2019)    13.1
## 2 Eastern Europe After COVID-19 (2021)    11.4
## 3 Northern Europe Before COVID-19 (2019)    16.0
```

```
## 4 Northern Europe After COVID-19 (2021)    14.1
## 5 Southern Europe Before COVID-19 (2019)    8.9
## 6 Southern Europe After COVID-19 (2021)    7.04
## 7 Western Europe Before COVID-19 (2019)    12.6
## 8 Western Europe After COVID-19 (2021)    11.0
```

#For the event analysis, we use COVID-19 as the relevant event. COVID-19 began in 2020 and strongly affected European labour markets through lockdowns, remote work, reduced working hours, job losses, and increased unpaid care responsibilities. These changes may have affected men and women differently, making COVID-19 relevant for studying the Gender Pay Gap.

#This section uses two visualizations. The first figure shows the trend in the Gender Pay Gap around the COVID-19 period. The second figure focuses specifically on the comparison between 2019 and 2021, with 2019 representing the pre-COVID period and 2021 representing the post-COVID period.

```
